

## Automatic Pressure Controller LUMINATION

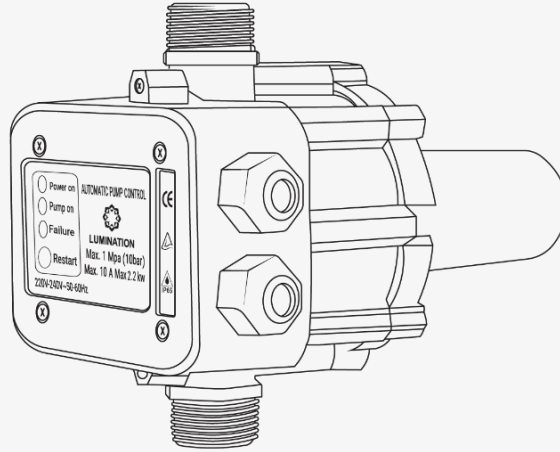

An automatic pressure controller for a water pump keeps water pressure constant by starting and stopping the pump automatically based on system demand.

### Advantages

- ✓ Automatic operation
- ✓ Protects pump
- ✓ Stable water pressure
- ✓ Energy savings (especially with VFD)
- ✓ Longer pump life

### Technical Specification

|                              |               |                             |          |
|------------------------------|---------------|-----------------------------|----------|
| Model:                       | MT-1          | Voltage:                    | 220-240V |
| Max. Power:                  | 2.2KW         | Frequency:                  | 50-60Hz  |
| Max. Current:                | 10A           | Joint Screw:                | 1"       |
| Max. Working:                | 10bar         | Max. Operating temperature: | 60°C     |
| Starting pressure to choose: | 1.5bar/2.2bar | Protection grade:           | IP65     |
